WHAT ELSE GOES INTO A FOLTZ BUILDING?...

THAT'S UP TO YOU.

Joel Vance • Harwood, ND "Materials and workmanship were top quality. The two man crew were very efficient and thorough in every way."

C U S T O M D E S I G N

Every Foltz building is custom designed because every customer has different needs.

Your Foltz representative will help you develop a building design that maximizes the usable space inside your building while creating an exterior appearance that fits your site.

From the placement and size of doors and windows, to added options such as vented overhangs, ridge light panels, wainscot and continuous ridge ventilation, you can trust your Foltz representative to show you the design features that make Foltz buildings the very best.

Engineered Strength

Foltz buildings feature factory built trusses, engineered to meet and exceed maximum snow and wind stress requirements for the upper Midwest.

Quality Materials

Foltz buildings feature, 2" x 6" knee bracing, 2" x 6" wall girts, 2" x 6" diagonal corner bracing and roof purlins; all made of Machine Stress Rated Lumber, which is superior in strength to construction grade lumber. Glue-laminated columns are backed by a 60 year warranty and anchored with re-rod and concrete. The attractive and durable commercial steel that goes into every Foltz building features a

hot dipped galvanized (G-100 zinc) coating, a primer coating to protect against corrosion and a final coat of MS Colorfast 25, called Ceram-A-Sil. The finish is warranted for 45 years against blistering, cracking or peeling.

Superior Construction

Foltz buildings are constructed by experienced crews, with the equipment and know-how to do the job right. Foltz crews are licensed and insured, working year-round to insure prompt construction of your building. With more than 35 years of experience and thousands of satisfied customers, Foltz has a solid reputation for quality.

Imagine the Possibilities

Whether you need a horse stable, riding arena, cattle barn or a livestock confinement facility, Foltz can do the job. Versatility is the hallmark of a Foltz building. If you have a livestock housing need of any kind, Foltz can offer a solution to fill that need.

A Design To Meet Your Budget, Function And Appearance Needs

Designs of stables, barns and livestock housing facilities vary as much as the animals themselves. Fortunately for you, your Foltz representatives have wealth of knowledge and experience when it comes to designing facilities that meet your needs for function and appearance.

Foltz wood frame construction and clear-span trusses allow for the design flexibility you need. And our exterior appearance options, including a wide selection of colors and trim packages, make Foltz an attractive choice as well.
